

Markdown Basics

This page shows every standard Markdown element MD Visor renders - no special extensions needed, these all work in any Markdown editor.

Headings

Headings go from # (largest) down to ##### (smallest):

```
# Heading level 1
## Heading level 2
### Heading level 3
```

Emphasis

Bold, *italic*, ***bold and italic***, ~~strikethrough~~, and **highlighted** text, all inline.

Lists

Bulleted, with nesting:

- Coffee
- Tea
 - Green tea
 - Black tea
- Water

Numbered:

1. Preheat the oven
2. Mix the ingredients
3. Bake for 25 minutes

Task list:

- ☒ Write the first draft
- ☐ Get it reviewed

Links

Learn more about Markdown - hover to see the target, click to open it in your browser.

Blockquote

A blockquote sets a passage visually apart from the rest of the text - handy for a quotation, a callout, or an aside.

Inline and block code

Inline code looks like `this`. A fenced block gets syntax highlighting:

```
def greet(name: str) -> str:  
    return f"Hello, {name}!"
```

Table

Left-aligned	Centered	Right-aligned
a	b	c
100	200	300

Horizontal rule

Used to separate distinct sections of content.

That's every basic building block - combine them freely. MD Visor also adds a number of extensions on top (math, diagrams, tables from CSV, cross-references, ...) covered by the other example documents in this series.
